CHALLENGE NAME : [POSTMANZZZ]

DEV : [SAKSHAM SAIPATWAR]

CATEGORY : [WEB]

LEVEL : [MEDIUM]

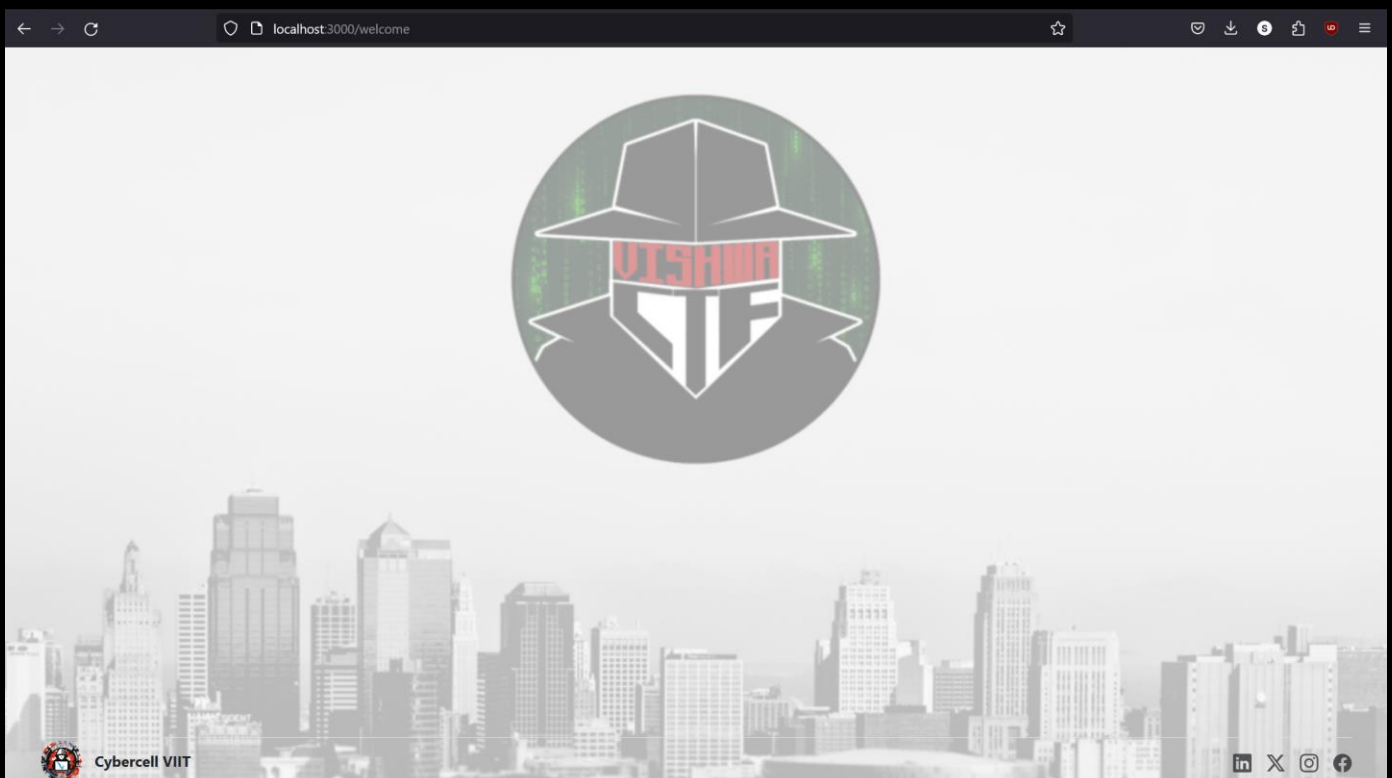

2024

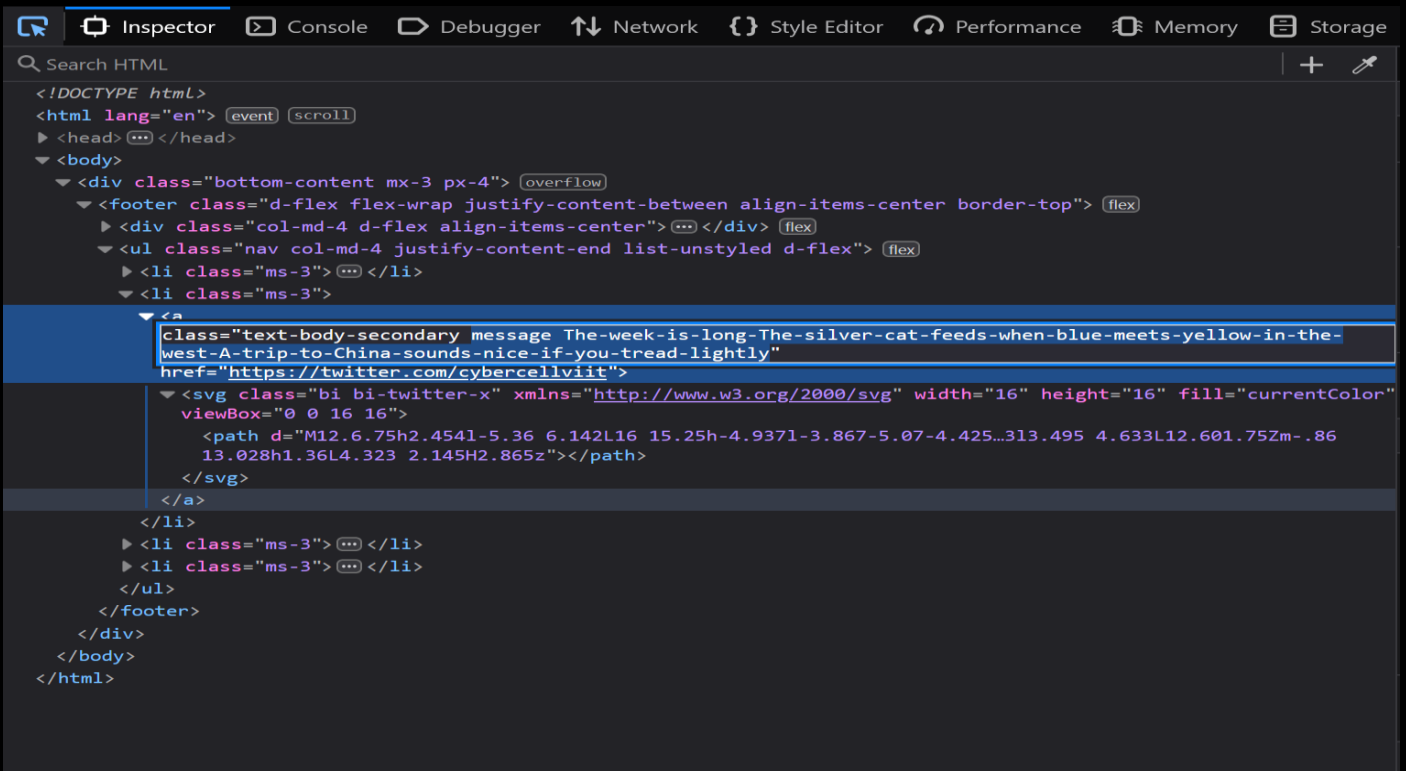

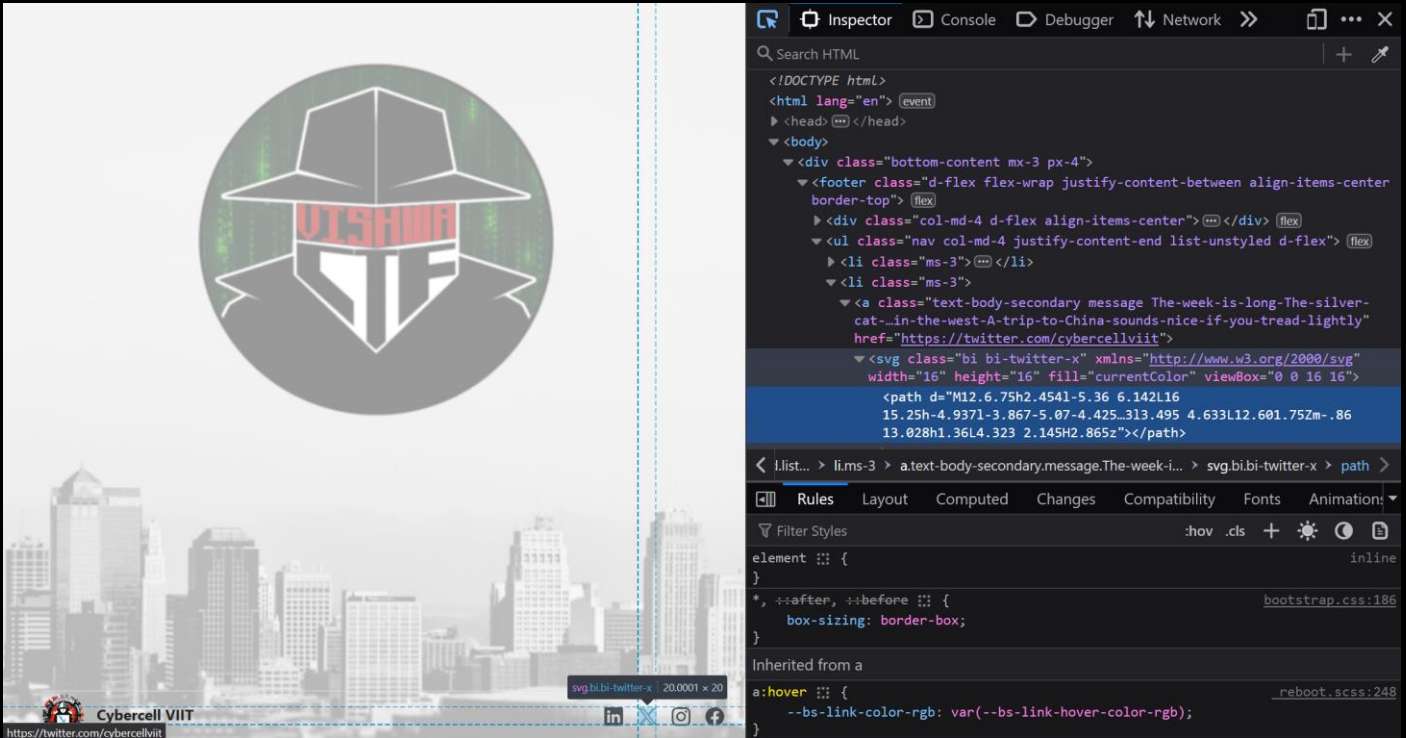

Description :- A postman has been assigned a task, and the only details provided are (1) he has to find the message inside Twitter (2) he has to post the message. Help him complete his task, and you will be rewarded

Interpretation :- The Name of the challenge refers to the use of postman application , also the “zzz” at the end refers to z-index in CSS or simply how the order affects the placement of any element .

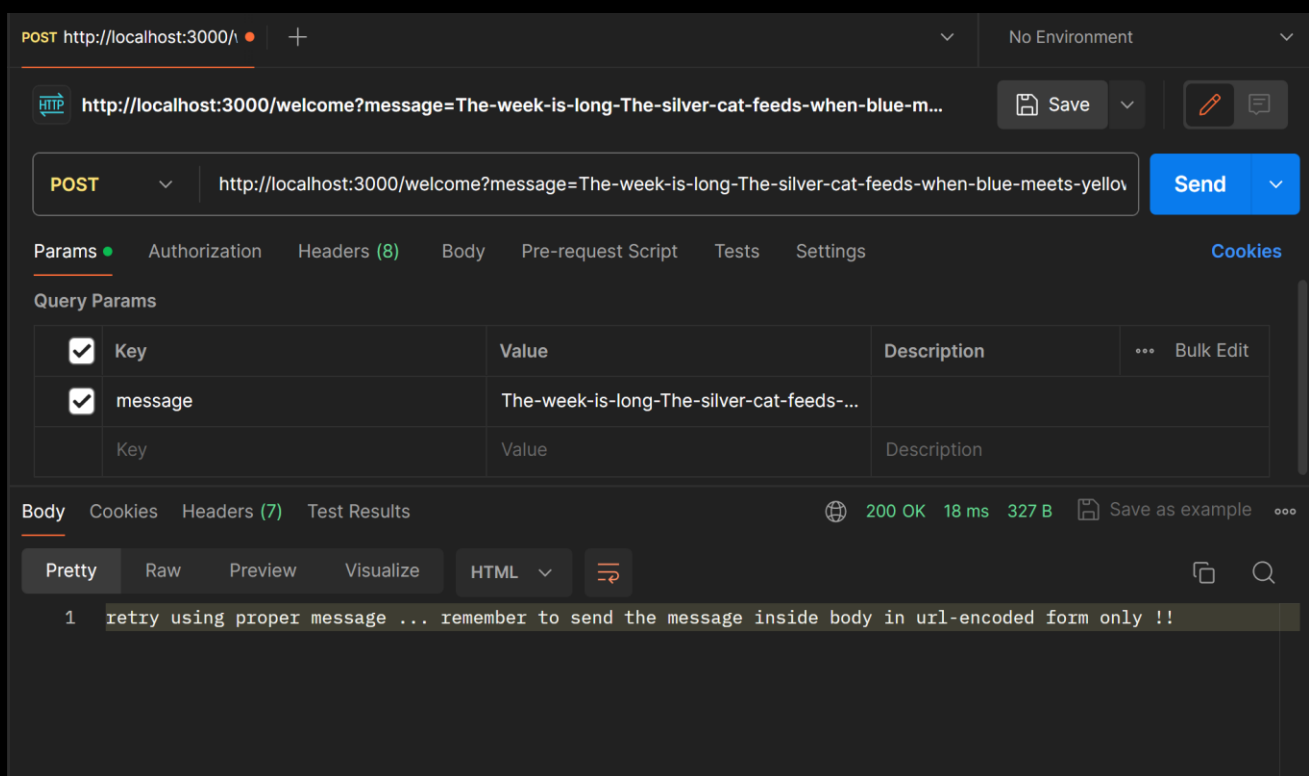

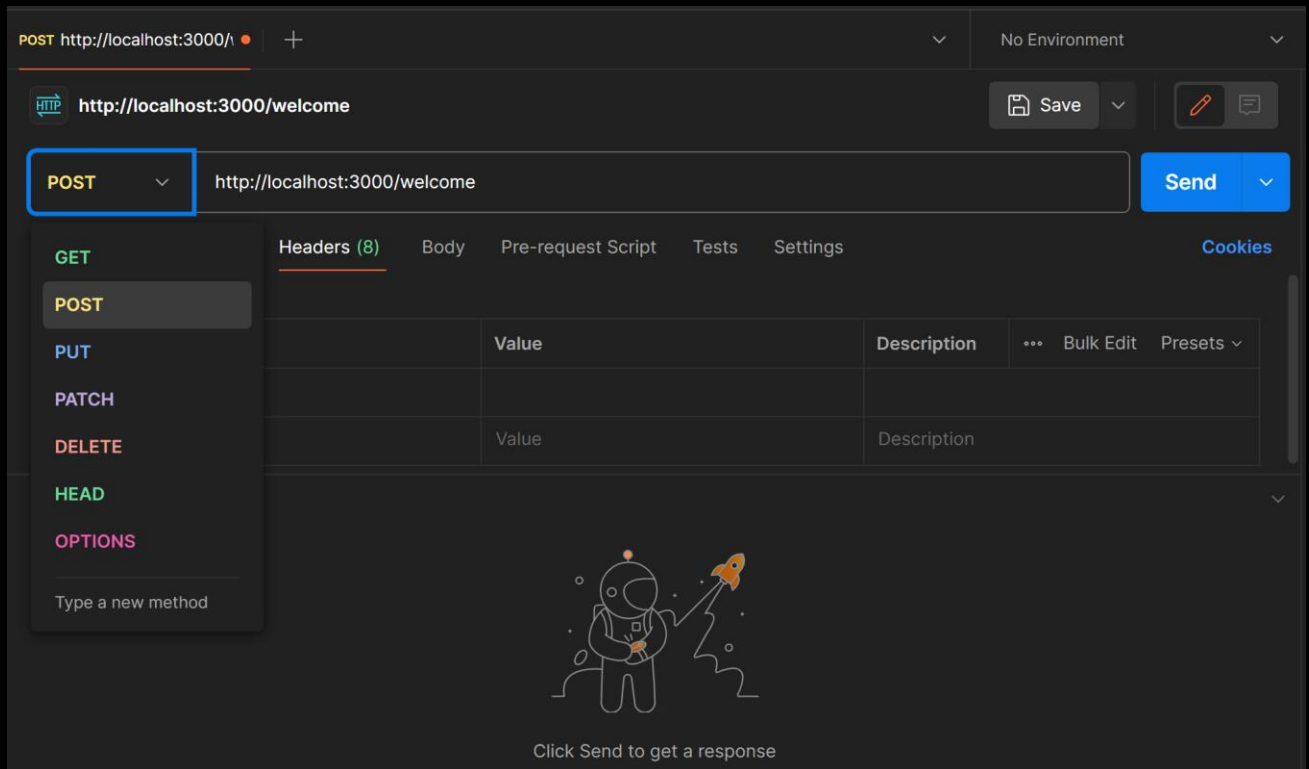

Step 1 : *Navigate to the website ... you should see the welcome page (with a footer including few href's).*

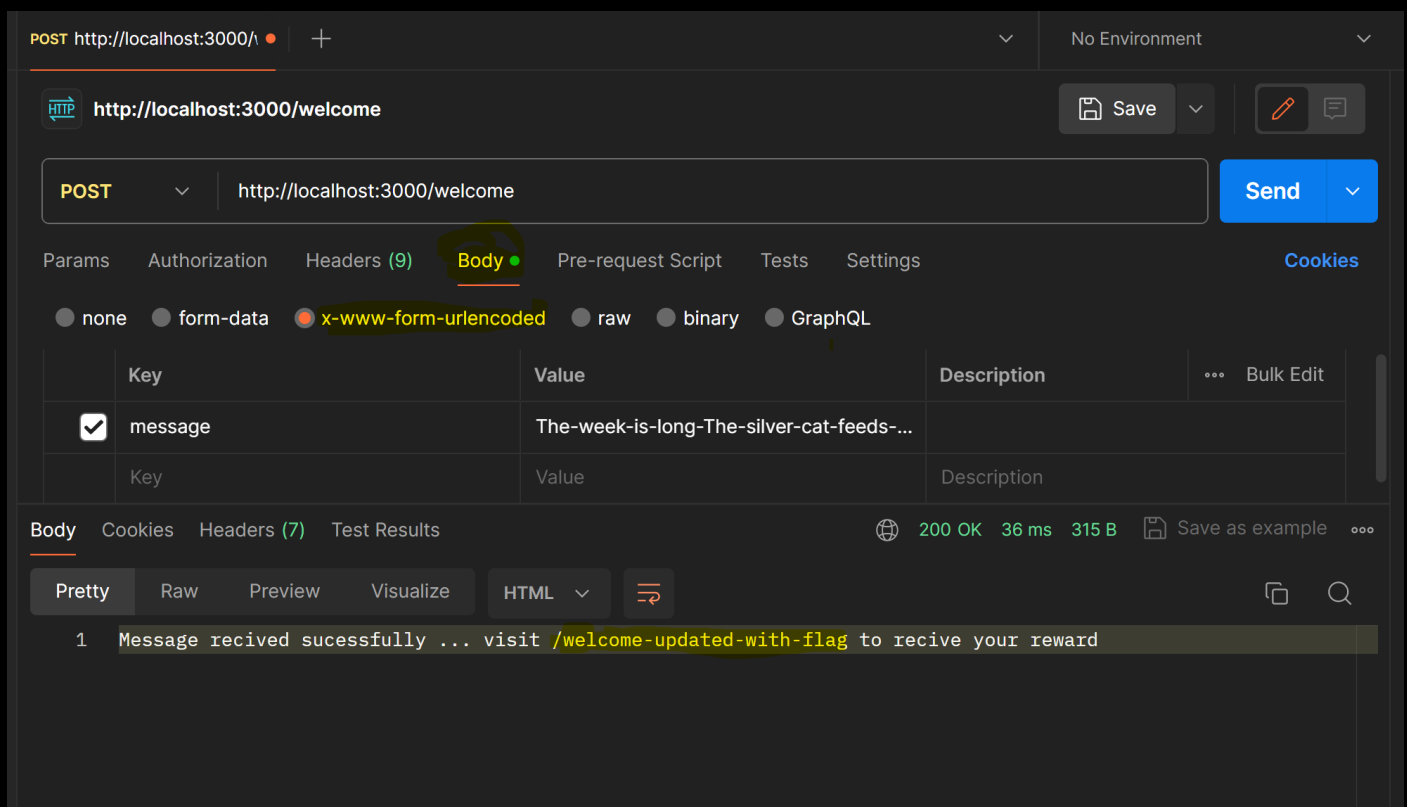

Step 2 : Search for the message inside twitter (logo inside footer of the page)

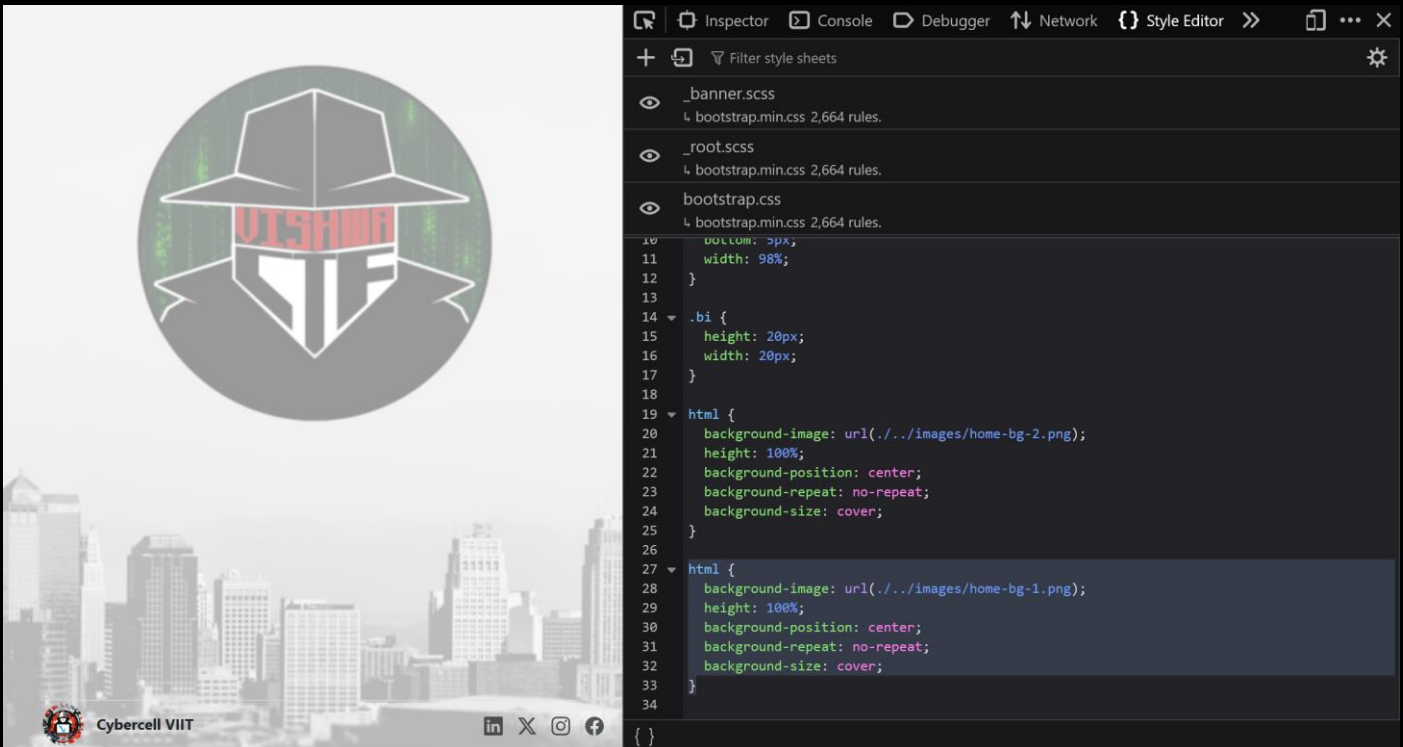

Step 3 : Now open the postman and send the post request on current URL along with the message ... Select the method as post and enter the current URL

Note : When you send the message using post method ... you get the response stating the correct format for sending the post request . After sending the correct message using correct format ... you will receive a link .

Step 4 :- Navigate to the given URL ... apparently you will see the same page as before . But the difference is with the CSS , it now contains two background images for the html ... the one containing the flag overridden by the normal image

Note : Inside the CSS file , you will find two background images for html ... delete the below one to get the flag image .
